Glitz Art!**

Quilts, T-Shirts, Napkins,
Tablecloths, Xmas Skirts,
Costumes & More!

Add sparkle to your fabrics! For designing and personalizing with glitter, Art Glitter Fabric Dries Clear is a non-toxic, water-based adhesive that remains permanently soft and flexible. "FDC" is machine washable after heat-curing, or hand washable after air drying for two weeks.

Transform your fabric! The design is already there, all you do is add the pizzazz! "Color" in the areas you want to highlight or add detail to a design where it doesn't exist. Change a color completely or make your own design! Stamp or draw a design on material, using a fabric stamp pad, paints or freehand a name with FDC. Adorn everything- purses, hair bows, jeans, T-shirts, jackets, backpacks, belts, pocket books, hats shoes, the sky's the limit!!!

Sparkle outside too! FDC will heat cure naturally in direct sun after two weeks. So glitter your lawn art, mailboxes, signs, etc. Art Glitter Fabric Dries Clear works wonderfully on wood, metal, concrete, ceramics, cling vinyl, and artificial flowers. Brush FDC on for large projects.

Dazzle your quilt sections with Art Glitter and Fabric Dries Clear before sewing them together. Then heat cure them separately and sew together as usual. FDC is flexible, easy to sew over and won't gum-up or harm your sewing machine. To glitter a finished quilt, lay out and flatten area to embellish. Carefully apply glue and glitter, taping off excess glitter after completing each color. Let dry completely and gently brush off additional glitter to avoid shedding.

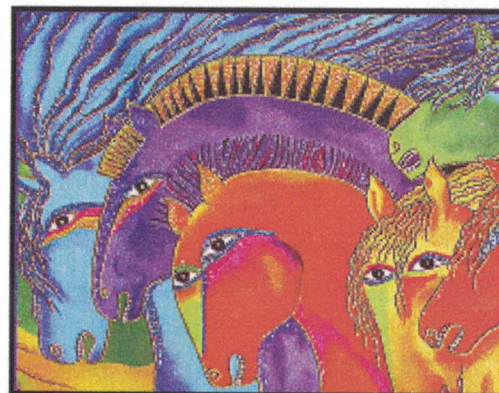

Your fabric does not need to be pre-washed. Art Glitter Fabric Dries Clear works best on 100% cotton. Not for use on silk or rayon-type fabrics. Use an Art Glitter Ultrafine Metal Glue Tip for fine lines. Large areas may be filled in with the spout. FDC works equally well with transparent or opaque Art Glitter.

Quilt Section or Frameable Art

Featured Fabric: Laurel Burch
"Wild Horses of Fire"

Materials:

- Cotton Designer Fabric
- Iron
- Freezer paper
- Tape
- Mat board
- Fabric Dries Clear Adhesive
- Ultrafine Metal Tip
- Ultrafine Art Glitter colors that match the Fabric
- Foil covered cookie sheet

Preparation: Remove seal in FDC bottle. Tightly twist spout back on. Pop off spout cover. Attach Ultrafine Metal Tip to spout by firmly turning it to the right in a downward motion. Put a creased letter-size sheet of paper under each glitter jar to catch excess glitter. Adhesive is quick drying. Spoon on Art Glitter while adhesive is wet, white, and shiny. Work in small areas. Return glitter to its jar by sliding glitter to paper crease and pour back in jar.

Directions:

Iron waxy side of freezer paper to back of fabric. Fold and tightly tape fabric around a small mat board.

Touch metal tip to fabric before squeezing. With a light amount of pressure, glide glue tip across fabric to make a line or to fill in an area. Spoon on one glitter color on wet adhesive. Tap off excess over creased paper. Continue applying glitter colors in same manner. Glitter will not stick to fabric that does not have glue on it. It can be brushed or shaken off after adhesive has dried. Let dry thoroughly 4-5 hours or overnight before heat curing.

Heat Curing: Preheat oven to 300 degrees and shut off. Remove tape, freezer paper and board. Place on a foil covered cookie sheet, glitter side up, in hot turned off oven for thirty minutes. Fabric is now ready to hand or machine wash in cold water. Line dry. For larger fabric items, let air dry two weeks and hand wash. Do not bleach, dry clean or use fabric softeners. When pressing, try to avoid ironing glitter. It is best to use a steam iron to get out wrinkles.

Tip: Hold glue bottle in your hand like a pencil, resting it in your hand with out applying pressure. Only your thumb presses the side of the bottle. Wipe tip often with cloth to remove adhesive. This is important when creating fine lines.

Tip: Use stainless steel pin in tip for temporary storage or to move glue into tiny areas before applying glitter. Self clean tip in original tube by soaking in water. Blow out adhesive water twice before reattaching.
